

Optimize & Enhance your day.

The MMIT **FMAudit** Solution allows you to manage your print fleet like never before! When your supplies dip below a pre-established percentage, our experts are alerted and new supplies are shipped out to you right away. **FMAudit** can run on a server or just one desktop computer, takes minutes to set up and best of all: it's free!

How It Works

The **FMAudit** Solution automates and simplifies meter reading activities, reducing manual intervention and delivering accurate results. The non-invasive application automatically creates a snapshot of all networked printing devices. The **FMAudit** app automatically collects copy, print, scan, fax and color usage data from most standard networking devices, copiers and printers. Another important aspect, Automatic Toner Replenishment. When your device reaches the 25% level of toner left, we create the order and ship the same day. We receive these alerts every 4 hours to optimize efficiency!

- No cost or hidden fees
- Install link is sent by email and easily installed
- Enterprise-level installations are supported with the ability to analyze hundreds of devices
- Removes the complex and costly engagement cycle associated with device identification, meter collection and Toner ordering
- Increase office productivity with minimal manual intervention
- Reduces the amount of bandwidth used during a discovery
- Delivers accurate billing results
- Is 100% HIPPA compliant
- **How Secure? FMAudit is also currently installed in Hospitals, Banks, and most notably at a few US Air Force bases.**
